

COMPETITIVE ADVANTAGES

SAM's revolutionary "SETAX" Non Glue Clothing system !!! (SAM's patent)

- The use of SETAX in SAM's tables means **cloth on slates can** if necessary **be re-stretched**. It is important to mark or re-mark cloth only after all stretching is completed and the fit is satisfactory. Otherwise, the position of any spots or lines may be altered.
- Practice makes perfect and you may find a variation to this method that suits you better. Do not be afraid to try several times, provided you are gentle in removing the cloth **you can re-apply repeatedly without damaging the cloth**, a distinct advantage over traditional methods using contact adhesive.
- SETAX **cloths** are supplied with **velcro** stitched along their edges and pocket cut outs.
- SAM tables have **velcro anchors** glued to the edge and undersides of **slates**.
- Recovering a slate can be achieved **without** the use of **glue, or removing the slate from the table**.
- There are **no** on site problems with **unpleasant smells and mess**.
- This means one engineer can handle a recover!!!

Velcro anchors in slate

Velcro on cloths

Perfect stretching

non glue clothing and **PRO Active** cushions make a **SAM table the quickest and easiest to maintain, ever.**
